

$$\int_{\mathbb{R}} f d\mu$$

# Integración por Partes Dr. Juan Luis Palacios Soto palacios.s.j.l@gmail.com

$$\frac{d}{dx}(f\omega)g(x) = \frac{d}{dx}(f\omega)\cdot g(x) + f\omega\cdot\frac{d}{dx}(g(x))$$

$$\int (f\cdot g)' = \int f'g + \int fg' \qquad \qquad \frac{f}{g} = f\cdot g^{-1}$$

## Definición (Integración por partes para integral indefinida)

$$\underbrace{\int f(x)g'(x)dx}_{}=\underbrace{f(x)g(x)}_{}-\underbrace{\int \underline{f'(x)g(x)}_{}dx}_{},$$
 o bien si  $u=f(x)$  y  $dv=g'(x)$  la fórmula queda

$$\int udv = uv - \int vdu.$$

#### Definición (Integración por partes para integral definida)

$$\int_{a}^{b} f(x)g'(x)dx = f(x)g(x) \Big|_{a}^{b} - \int_{a}^{b} f'(x)g(x)dx,$$

o bien si u = f(x) y dv = g'(x) la fórmula queda

$$\int_{a}^{b} u dv = uv \bigg|_{a}^{b} - \int_{a}^{b} v du.$$

C07 Integración por Partes

Ejemplo

$$\int \underline{x \sin(x) dx} = \frac{\chi^2}{2} \operatorname{serd} - \sqrt{\frac{\chi^2}{2}} (\omega s(x)) dx$$

$$f = 5$$
 enla  $f' = cos(0.0)$  da

No conviend

$$f = x$$
  $\Rightarrow$   $f' = dx$ 

$$g = -\cos(\omega)$$

$$= \rangle = -\infty \cos(\alpha) - \int -\cos(\alpha) d\alpha = \infty \cos(\alpha) + \int \cos(\alpha) d\alpha$$

$$\int a sonbodu = a (os(a) + sen(a) + C.$$

<ロ > ∢回 > ∢回 > ∢ 亘 > √ 亘 → りへ(~)

mas compliceda

# Ejemplo

$$\int \ln(x)dx = \int e^{-u}u du$$

$$f = \ln(\alpha) \qquad f' = \frac{d\alpha}{2}$$

$$g = \alpha$$

$$\Rightarrow \int \ln(\alpha) d\alpha = \alpha \ln(\alpha) - \int \alpha d\alpha = \alpha \ln(\alpha) - \int d\alpha$$

$$= \alpha \ln(\alpha) - \alpha + C.$$

$$= \alpha \left( \ln(\alpha) - 1 \right) + C.$$

## Ejemplo

$$\int xe^x dx = xe^x - \int e^x dx$$

$$f=x$$
 =>  $f'=dx$  =  $xe^{x}-e^{x}+c$ .  
 $g'=e^{x}dx$  ==  $(x-1)e^{x}+c$ .

$$\int x^{2} e^{x} dx = x^{2}e^{x} - \int 2xe^{x} dx = x^{2}e^{x} - 2\int xe^{x} dx$$

$$f = x^{2} \qquad f = 2xdx$$

$$g' = e^{x} dx \Rightarrow g = e^{x}$$
